**Introduction**

**Purpose**

**Methodology**

**2017 Summary Table**

## Introduction

The Mid and East Antrim Borough Housing Monitor Report 2017 has been prepared by the Development Plan Team within Mid and East Antrim Borough Council using Housing Land Availability Monitor information. The 2017 Housing Monitor Report is the second summary produced by Mid and East Antrim Borough Council relating to the availability of land for housing development across the Borough and comprises tabular information extracted from the Housing Monitor Database.

In terms of output tables, survey work was undertaken by the Development Plan Team for each of the monitored sites as recorded in the Housing Monitor Database for the period 1st of April 2016 to the 31st of March 2017.

This report uses the housing baseline established by the Regional Development Strategy for Northern Ireland 2025 (RDS), i.e. the end of December 1998 and shows housing land availability across the Borough for those settlements designated in Development Plans.

# Purpose

This report contains the findings of the Annual Housing Monitor for the survey period 1st of April 2016 to 31st March 2017 and provides information on the methodology involved in undertaking the Housing Monitor. To ensure that there is an adequate and continuous supply of available housing land within the Borough over the lifetime

of the LDP it is essential to record the number of dwelling completions and the level of housing land supply remaining available within the settlements on a yearly basis. Therefore the purpose of the annual Housing Monitor is:

1. To monitor the course of housing development in settlements with regard to the RDS;
2. To monitor progress of housing development in settlements in accordance with the provisions of prevailing Development Plans;
3. To inform the preparation of the LDP with regard to the allocation of land for housing; and
4. To provide information on the available potential for further housing development in settlements.

Methodology

The Housing Monitor assessment is based on an annual survey of housing monitor sites with the Borough, the survey year runs from the 1st of April to the 31st of March, with site visits undertaken in April / May. The Survey covers all settlements as defined in prevailing development plans but excludes all dwellings in the open countryside. It identifies the number of dwelling units completed and the area of land developed and records the available potential of land and dwellings that remains undeveloped on monitored sites within settlements. It should be noted that apartments are included in the Housing Monitor as dwellings.

Monitored sites include those identified from the previous annual survey that were not recorded as complete as well as any newly identified sites. They are sites that are identified as potentially suitable for residential development in prevailing development plans through zonings and any other urban sites that have been granted planning permission for residential development through a planning application or planning appeal. There may be other land within settlements that is not included in the housing monitor. However, such land becomes a monitored site once identified as suitable for residential development.

It is current practice to keep within the Housing Monitor those sites that have received planning approval for housing but has expired, unless a known change in circumstances arises such as;

- (a) having subsequently been refused planning permission for residential development; or
- (b) being developed for non-residential use; or
- (c) where the LDP revises this potential.

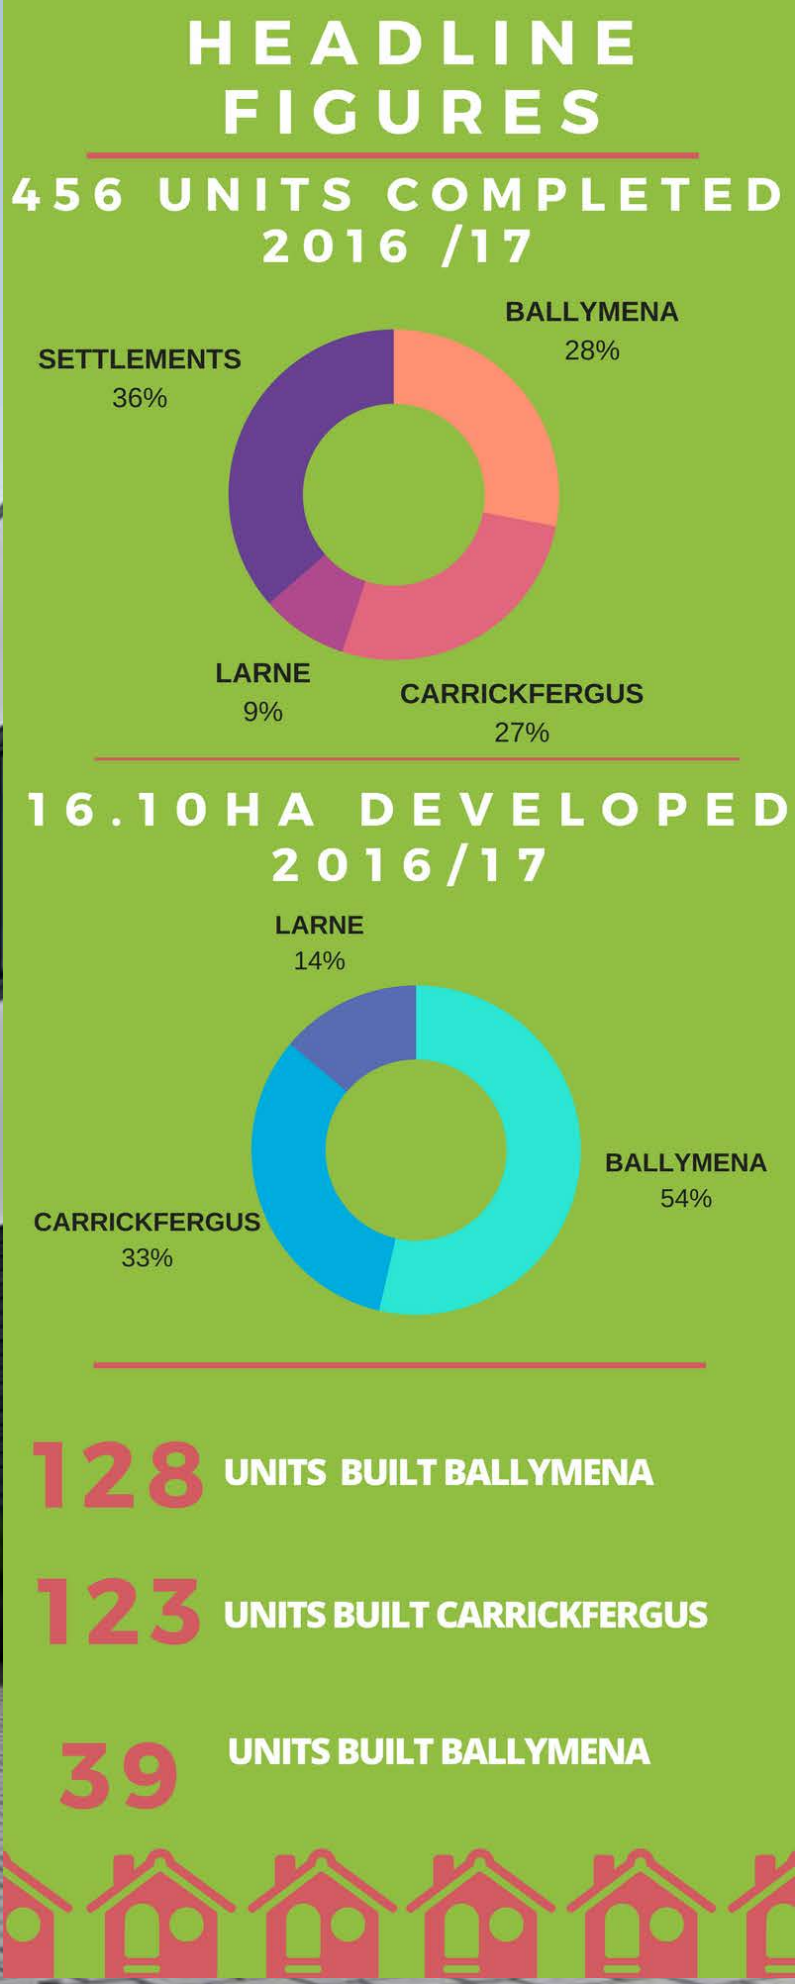

A previously monitored site will be removed from the Monitor where any non-residential development commences or where a new or replacement LDP removes its potential for residential development. Sites with planning permission which has now expired and have not yet commenced will now not be physically monitored. Instead a desk based study using orthophotography and other available information will be used to assess these sites. These sites will still be retained within the Housing Monitor Database for information purposes but will not be included in any summary data tables.

In order to calculate potential dwellings available in situations where only the site area (and not the exact number of dwellings is known), an estimate of likely density is used. This is based, where possible, on given characteristics such as site location, landform or adjacent development form and density. Where this approach has not been considered suitable, an average density (normally 25 units per hectare) has been applied to the site. Clearly, where actual development densities vary from that assumed, it will have implications for the accuracy of estimates compared with actual available potential.

Adjustments as necessary will thus be made as part of the review undertaken in future annual housing monitor work.

The Housing Monitor records net housing gain for each site. This involves taking account of fit housing that is lost to make way for new housing. It is acknowledged that there may be instances where the gross total may not have taken account of fit housing which was replaced. Where this is identified, appropriate adjustment will be made in the following years Housing Monitor. For example, redevelopment of a site that contained 1 dwelling for 10 apartments, is recorded as a gain of 9 dwelling units.

It is also acknowledged that some of the potential land for housing development in settlements might not be realised due to various constraints or the refusal of landowners to release their land for development. These matters will be further investigated during the course of preparing the Local Development Plan.
